HOME OF
DIGITAL SIGNAGE

At ZetaDisplay we believe in the power of digital communication. Broadcasting the message at the right time, in a relevant place and with the right impact. You can amaze, inspire, inform, put the viewer at ease or persuade him to buy. Digital Signage works for every sector!
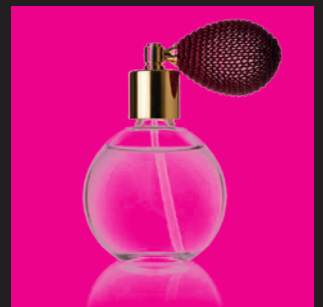

THINKING BEYOND THE SCREEN

THE OPTIMAL DIGITAL SIGNAGE SOLUTION

Screens, interactive kiosks, LED walls, data links, call systems, feeds, audio, lighting and so on.
It's all about the right combination of hardware and software. Both are necessary to achieve the optimal Digital Signage solution, in whatever form. We like to think along with our clients, starting from the concept. Because we have the expertise to advise, supply, install and manage.

## WORLD'S MOST USER-FRIENDLY DIGITAL SIGNAGE SOFTWARE

With our Digital Signage software, you can easily create a broadcast for your own business communication channel. You can start broadcasting in no time via our cloud solution.
The software excels in user-friendliness; particularly intuitive and versatile.

"From strategy and planning to hardware, implementation, content production, analysis and management "

Digital Signage allows you to increase visitor numbers, improve your image, target products or make waiting times more pleasant, among other things. Although you may have sector-specific challenges, an ideal Digital Signage solution will always focus on four key objectives: image, connection, efficiency and conversion.

"Manage your own Digital Signage network the easy way"

CREATION

Our design team has created various templates for all possible applications. Want to go one step further? Our Content Studio creates specially tailored templates, focusing on the branding of your brand or company.

HARDWARE

Quality is of great importance to us. Therefore, we only work with A-grade suppliers for our hardware. Our software is ideally suited for SoC screens. Here, the media player is fully integrated into the screen. Sustainable, efficient and cost-effective!
Of course, we also work with separate media players. These are powerful in performance and, in addition to one individual screen, can also be used to control multiple screens simultaneously (a video wall).

OUR SOFTWARE IN A NUTSHELL

- User-friendly
- Future-proof technology
- Cloud-based
- Multilingual
- Including professionally designed templates
- Development of functions for customers

- Easy installation and configuration (Plug & Play)
